Agnivesh Das

DATA ANALYTICS & AI LEADERSHIP · CUSTOMER INSIGHTS · DATA ENGINEERING

Bentonville, Arkansas agnivesh.das@gmail.com linkedin.com/in/agnivesh-das

Portfolio: agnidas31.github.io/Agnivesh-Das

Data Analytics & AI Leader with **13+ years** across **Walmart, BP and Nike**, currently leading a **team of 8+ across Operations, Workforce Management, CRM and Self-Serve AI** for Walmart Customer Engagement Services. Builds the foundations that make enterprise data trustworthy (governed metric repositories, measurement frameworks, data pipelines) and the AI agents that put answers in leaders' hands the moment they need them. Expertise spans conversational AI, customer analytics and lifetime value, fuel and fleet operations, and data engineering, consistently turning analytics from a rear-view mirror into a steering wheel. Just as comfortable shaping the data strategy as building the first working version of it.

SIGNATURE WORK

$17M
CRM AI Savings
WALMART · CRM
Championed Agent Assist voice and chat AI across CRM, cutting average handle time 23% on the way to realized savings.

25% → 62%
Self-Serve Rate
WALMART · SIERRA VOICE AI
Lifted self-service on the AI voice assistant, with CSAT climbing steadily alongside it.

45% → 71%
Appeasement Strategy
WALMART · CUSTOMER ENGAGEMENT
Sharpened how appeasements are matched to customers; the findings fed directly into Walmart+ adoption strategy.

AISLE1
AI Insights Product
AGENTIC AI · CLAUDE + BIGQUERY
VPs and senior directors now pull core metrics themselves in plain English, no ad hoc request needed.

38%
Fuel-to-Store Conversion
BP · SINGLE CUSTOMER IDENTIFIER
Fuel and store data unified into one customer view, powering cross-shopping promotions.

4×
Average Customer Spend
BP · CUSTOMER LIFETIME VALUE
Customer-value insights steered marketing to the right customers, saving $8M and lifting retention.

3 → 1
One Global Fleet View
BP · GLOBAL FLEET
ESA, ANZ and the US on a single trusted KPI view; report prep cut 85%, decisions 3× faster.

22%
Better Inventory Recovery
BP · INVENTORY OVER & SHORT
Store audits turned into a ranked shrink-prevention view; priority stores flagged 4× faster.

LEADERSHIP & TECHNICAL CAPABILITIES

AI & Analytics Strategy	Agentic AI & GenAI Applications	Governed Metrics & Semantic Layers
Team Leadership & Delivery	Conversational AI Analytics	Measurement Frameworks & KPIs
Executive Data Storytelling	Customer Data Unification	Data Pipelines & ETL at Scale
Stakeholder Management	Customer Lifetime Value Modeling	Data Modeling & Governance
Self-Service Analytics Enablement	Fuel, Fleet & Shrink Analytics	BI & Dashboard Development

EXPERIENCE — WALMART

Manager, Strategic Insights & AI — Customer Engagement Services

Sep 2025 — Present

Bentonville, Arkansas · Conversational AI, CRM, customer service analytics

> **Championed AI initiatives across CRM that delivered $17M in savings and cut average handle time 23%**: bringing Agent Assist voice and chat agents from pilot through adoption, with pilot design, adoption tracking, scale-or-stop calls, and measurement through to realized savings.

> **Built AISLE1, an agentic AI insights product that lets VPs and senior directors query core metrics in plain English**: a Claude-powered analytics suite on a BigQuery backend that serves as the organization's governed metric repository. A semantic layer keeps every definition certified and consistent, so leaders get narrative answers on demand instead of raising ad hoc requests.

> **Drove appeasement utilization from 45% to 71%** by sharpening how service appeasements are matched to customers. The insights went on to help shape Walmart+ adoption strategy.

- **Built the measurement framework for Sierra, Walmart's AI voice assistant, lifting self-serve rate from 25% to 62%**, with CSAT improving consistently as adoption grew.
- **Lead a team of 8+ across four pillars (Operations, Workforce Management, CRM and Self-Serve AI)**, setting analytics priorities and tying each team's work to service cost and customer experience.

- **Built the Agent Performance Scorecard**, one performance management view for Walmart's internal and outsourced agents, holding both workforces to the same measurable standard.

EXPERIENCE — BRITISH PETROLEUM (BP) · 8+ YEARS

Senior Data Analyst — Dataworx AI Team

Feb 2021 — Aug 2025

Chicago, Illinois · Customer 360, identity resolution and customer value modeling across UK and European markets

> **Led development of the Single Customer Identifier (SCI), BP's Customer 360 foundation, lifting fuel-to-store conversion 38%**: unified till (EPOS), loyalty and card-payment data across fuel and convenience into a single customer profile across the UK, Germany and Poland.

> **Designed the deterministic and probabilistic matching logic behind SCI**: cleansed each source, matched exactly on site, date and basket type, then confidence-scored candidates within time and value tolerances.

> **Delivered $8M in marketing savings and a 4× increase in average customer spend through Customer Lifetime Value (CLV)**: built on the unified SCI view, value and retention insights pinpointed the highest-value customer segments and steered targeted marketing toward them, improving retention.

- **Engineered the CLV data foundation**, building the ~580-feature customer analytic record in SQL from SCI's linked data and partnering with data scientists on survival-based churn models and NPV valuation.
- **Mapped cross-channel behavior** (loyalty vs. card-only, fleet vs. non-fleet, fuel vs. shop), revealing customers who never swipe a loyalty card.

Data Analyst — NA Fuel Analytics Team

Feb 2017 — Jan 2021

Chicago, Illinois · Fuel, fleet and convenience retail analytics; owned data preparation, transformation and reporting end to end

> **Unified BP's global fleet card KPIs across ESA, ANZ and the US into one trusted report, cutting report preparation 85% and enabling 3× faster decisions by fleet managers**: standardized three regional systems into a common data model while keeping each region's definitions explicit (litres vs. gallons, cents per litre vs. cents per gallon, region-specific contribution margin).

> **Turned store inventory audits into a ranked shrink-prevention tool across Thorntons and ampm, identifying priority stores 4× faster and improving inventory recovery 22%**: consolidated audit adjustments by store, department and category (tobacco, beer, beverages, fresh food) and normalized losses to a per-day rate so stores on different audit cycles compared fairly.

> **Decomposed fuel margin against market and competitor prices into its drivers, cutting root-cause analysis time by 2× and improving supply decisions**: built a cents-per-gallon waterfall separating market (OPIS) margin, brand value, supply premium, contract terms and invoice-volume variance, rolling up to standard, integrated and environmental margin.

- **Built a fleet KPI dictionary and validation layer** reconciling volume, contribution margin and active cards and customers (monthly and rolling 3-month) to each region's source reporting, so leaders compared regions on trends and year-on-year change with confidence.
- **Delivered the inventory reporting suite in Power BI**, from monthly analysis and item-level detail to outlier-store rankings, latest audits and department and category trends, giving loss-prevention and store leaders a clear list of where to act first.
- **Aligned pricing, supply-cost, invoice and volume data to a single site × day × grade grain** and volume-weighted every margin component so the Tableau waterfall summed to total margin, with monthly, year-to-date and year-on-year views down to individual site and fuel grade.

EXPERIENCE — NIKE

Business Intelligence Engineer

Feb 2015 — Jan 2017

Beaverton, Oregon · Supply Chain Planning Analytics, Nike Digital; legacy Cognos to Tableau modernization

> **Owned the move of Nike's supply chain planning reporting from legacy Cognos to Tableau, speeding up decision-making 25%**: rebuilt aging static reports as interactive dashboards on SQL and Teradata, giving planning teams a faster read on supply against consumer demand for Nike Digital.

> **Built the data foundation underneath**: Teradata pipelines ingesting transactional and customer data from four primary sources, with ETL automated across billions of rows to cut manual workload **20% a month**.

- **Drove adoption of the new dashboards**, training 30+ team members and lifting dashboard utilization **40%**.

EXPERIENCE — EMBLEMHEALTH

Business Analyst

Feb 2013 — Jan 2015

New York City, New York · Health insurance (payer); ICD-9 to ICD-10 regulatory migration

> **Bridged business, clinical coding and IT teams through EmblemHealth's ICD-9 to ICD-10 migration**, a federally mandated overhaul that expanded diagnosis codes roughly five-fold: assessed the impact on data models, claims workflows and reporting, and turned it into Business Requirements and Functional Specifications documents.

- **Built the Requirements Traceability Matrix (RTM)**, tracing every business and regulatory rule from requirement through development and testing so nothing was missed in the cutover.
- **Led user acceptance testing for end-to-end claims processing**, translating business scenarios into test cases that confirmed claims processed correctly under ICD-10 rules.
- **Ran requirements sessions with claims, coding and compliance stakeholders** and supported code mapping from ICD-9 to ICD-10.

TECHNICAL ENVIRONMENT

AI & Analytics: LLM applications, agentic AI, conversational AI, natural-language querying, predictive analytics, customer lifetime value, survival analysis, customer segmentation

Data & Cloud: AWS (S3, Glue, Redshift, Athena, Lambda, Step Functions, CloudFormation), BigQuery, Teradata, Palantir Foundry, semantic and metric layers, data modeling, ETL

Languages & Tools: SQL, Python, PySpark, Apache Spark, Pandas, Tableau, Power BI, DAX, Claude

EDUCATION & CREDENTIALS

Master's Degree, Engineering Management · George Washington University, Washington, D.C. · 2010 — 2012

Bachelor's Degree, Electronics & Instrumentation · West Bengal University of Technology, Kolkata, India · 2006 — 2010
